Historia Aria (How I got here by accident)

1. I broke things to learn more about them and make them myself!
2. My degree is not cybersecurity or technology-related.
3. My cybersecurity journey technically began with a sewing machine!
4. The SEO experience landed me my first “big boy” job.
5. “Ethically” breaking things and stealing money from my work (and my boss was happy with it!)
6. “You’re hacking….”
7. ChibrrCon 2020
8. First Information Security role as a Security Engineer.

Job Opportunities? (How do I get YOE without YOE?!?!)

- Getting a job is like a CTF. Certs? Degrees?
  - No magic bullet. Lots of luck but be prepared when luck hits.
- Let the Principle of Least Privilege be your North Star.
  - How can you reduce risk of compromise at your workplace?
  - How can you help educate your co-workers on better security practices?
- "Entry point" to Cybersecurity?
  - PAM
  - Ethical Hacking
  - Winning CTFs
  - Presentations
  - Help Desk

Key takeaways (not textbook stuff, sorry)

- It is okay to say “I don’t know”
  - What you plan to do about it though?
- Don’t knock the small opportunities. Never know where they end up or who you will meet.
- Make time for hobbies (not just for your mental health)
- Your community is everything.
- The hackers don’t quit. Neither should you.
- Take what your parents/teachers/mentors say with a grain of salt (but don’t tell them I said that).

It's over!!!!

Seriously, thank you for having me!!!
